identifiers are not allowed, including the following:

- ○ Well-known passwords, names or phrases (e.g. "password", "123456", etc.)
- ○ The username (e.g NetID)
- Password will expire after 180 days
- Reusing any of the last 5 passwords is not allowed

Logging In

The primary way in which you will interact with the database is through the MySQL client. After logging into Omega, type the following command to launch the client, replacing <<your netid>> with your NetID. Do not include the brackets.

[netid@omega ~]$ mysql -u <<your netid>> -p -h acadmysqldb001p

IMPORTANT! Use your NetID in place of "netid" when entering the commands. For example, if your NetID is "axs9834," your login command will look like the following:

[axs9834@omega ~]$ mysql -u axs9834 -p -h acadmysqldb001p

```
[netid@omega ~]$ mysql -u netid -p -h acadmysqldb001p
```

You will then be prompted to enter your password.

```
[netid@omega ~]$ mysql -u netid -p -h acadmysqldb001p
Enter password:
```

Note: If after 7 days you have not logged in using the temporary password, the temporary password should still be valid. However, if you are still unable to login with the temporary password, you may submit a requestrequest for a password reset.

Changing Your Password

To change your password, type the following command using your own NetID and your new password and hitting Enter. Do not include the brackets around your NetID.

mysql alter user <<your netid>> identified by '########';

```
mysql> alter user netid identified by '##########';
```

When your password has been successfully changed, you will see the following output:

```
mysql> alter user netid identified by '##########';
Query OK, 0 rows affected (0.02 sec)

mysql>
```
